HOW TO USE THIS DIAGRAM

Purpose: This guide is part of a study and helps with practical planning and the learning process, but there are factors in plant health and management that are not covered here, such as: season, climate, temperature, specific types of plant and purpose, and other details.

Definition of the dates of the moons: 2 specific factors were considered as a guide, the distance of the moon from the earth (gravity) and percentage of night light (photosynthesis). However, a rough guideline of 2-3 days before and after the peak of each moon cycle can be used.

Sources: Testimony 2022-12-26 (A ciência de Deus na agricultura) and Prayer Booklet for 2023 Passover (Sectio: Planting by the moon).

Growing in knowledge: on the topic of knowing how to plant according to the lunar cycle "this is a science that we must learn" (Testimony: 26-12-2022). And there is still a lot to learn and put into practice.

GOD "appointed the moon for seasons; the sun knoweth his going down."

— Psalms 104:19

HOW TO USE THIS DIAGRAM

Purpose: This guide is part of a study and helps with practical planning and the learning process, but there are factors in plant health and management that are not covered here, such as: season, climate, temperature, specific types of plant and purpose, and other details.

Definition of the dates of the moons: 2 specific factors were considered as a guide, the distance of the moon from the earth (gravity) and percentage of night light (photosynthesis). However, a rough guideline of 2-3 days before and after the peak of each moon cycle can be used.

Sources: Testimony 2022-12-26 (A ciência de Deus na agricultura) and Prayer Booklet for 2023 Passover (Sectio: Planting by the moon).

Growing in knowledge: on the topic of knowing how to plant according to the lunar cycle "this is a science that we must learn" (Testimony: 26-12-2022). And there is still a lot to learn and put into practice.

GOD "appointed the moon for seasons; the sun knoweth his going down."
- Psalms 104:19
